

CGT 270 Data Visualization Hackathon

Summary of Findings

Visualization 1: Overdose Deaths in the United States (in 2015)

Overdose Deaths in the United States (2015 Total)

Created by Senny Huang

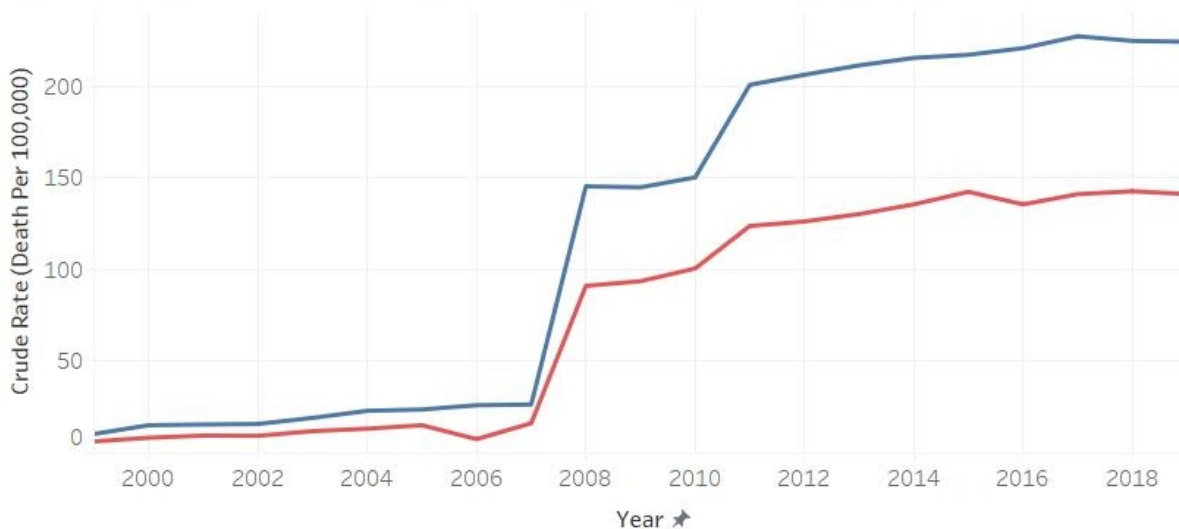

This figure represents the number of people who died from overdoses. The number is calculated by the deaths out of 100,000 people.

Insightful Hackers

Visualization 2: Drug Induced Caused Death by Gender in Indiana (1999-2019)

Drug induced caused Crude Death Rate in Indiana 1999-2019

Created by Sangin Lee

This visualization outlines the amount of Drug Induced Deaths by Gender in Indiana from 1999 to 2019. The first visual shows the total number of people per year while the second visual instead shows the amount out of 100,000 people.

Visualization 3: Average Drug Users Per County (1999-2010)

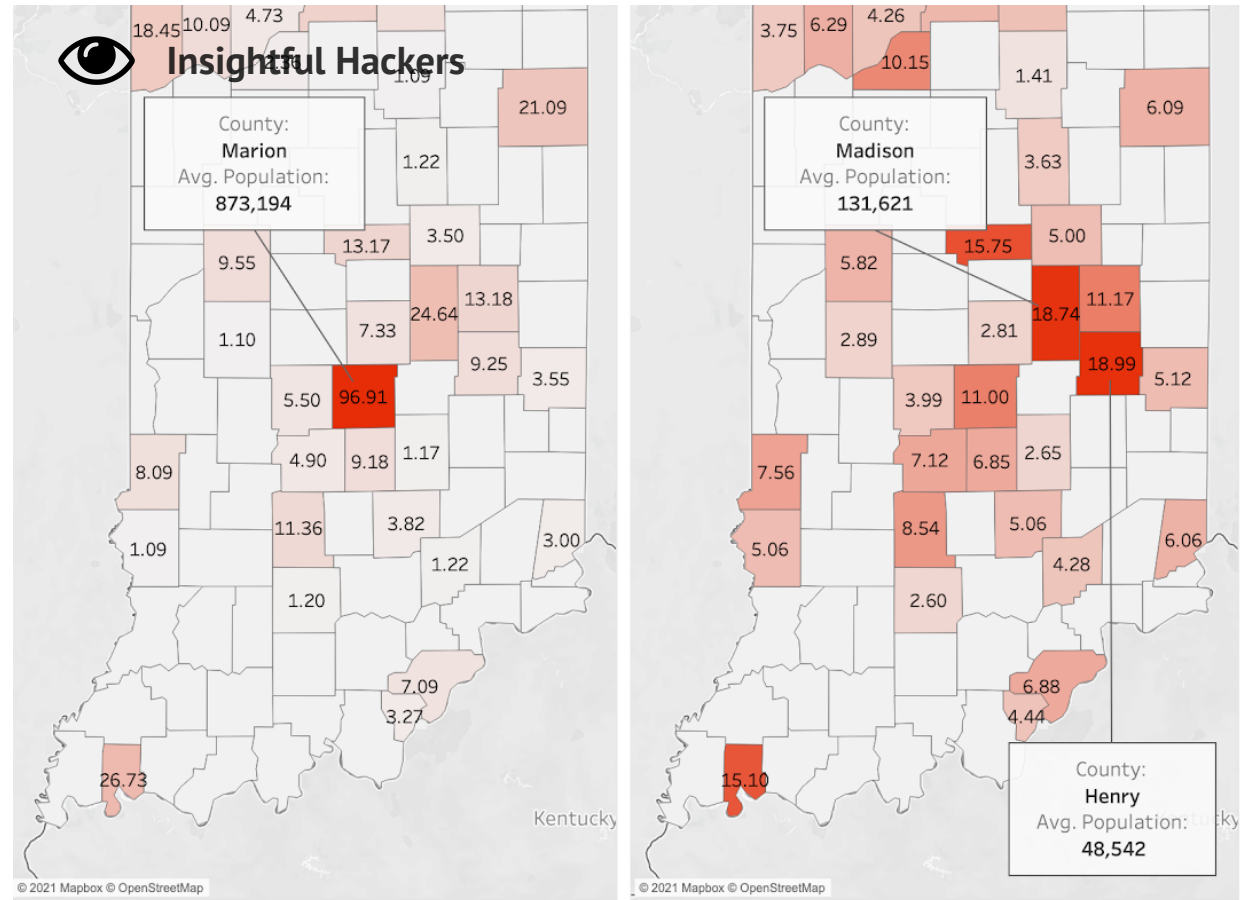

Average Drug Users Per County (1999 - 2010)

Average Drug Users Per 100k by County (1999 - 2010)

Avg. Users (left)
0.0 100.0

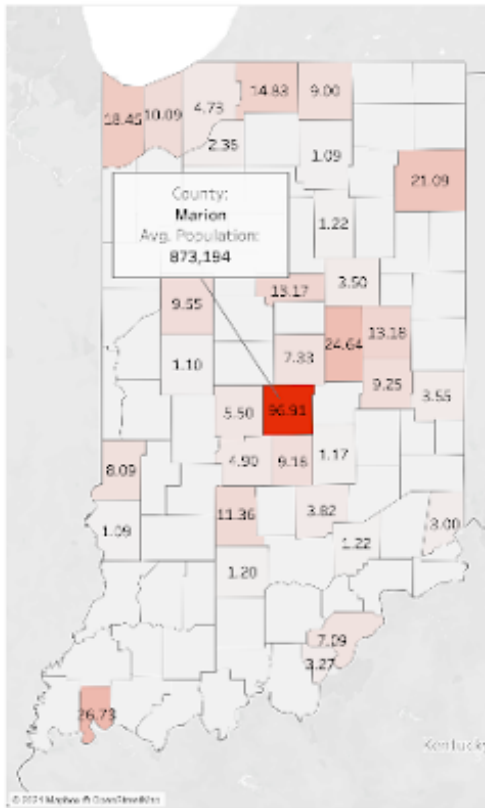

Avg. Users per 100k (right)
0.00 20.00

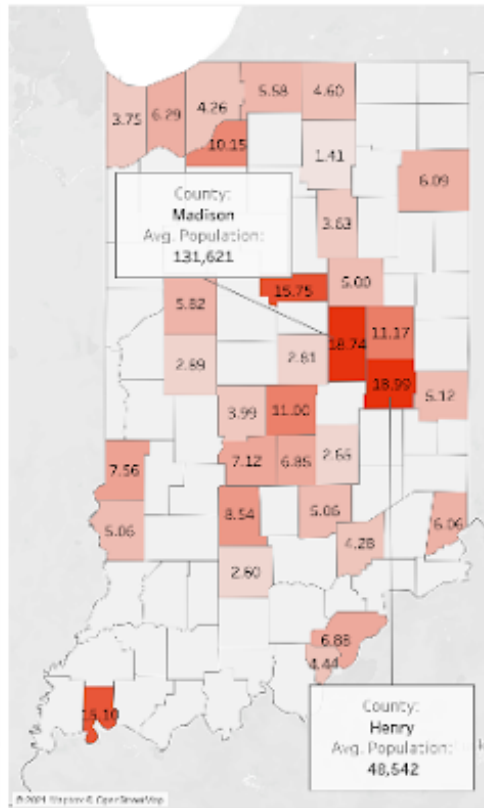

Identifying Drug Abuse in Indiana

Average Drug Users Per County (1999 - 2010)

Counties without drug users are not labeled

Average Drug Users Per 100k by County (1999 - 2010)

Avg. Users (left)

0.0 100.0

Avg. Users per 100k (right)

0.00 20.00
